

Dang Quang Minh

Unity Game Developer

minhdangquang0302@gmail.com Hanoi, Vietnam dangquangminh.vercel.app

PROFILE

Unity developer with a strong foundation in OOP, SOLID and design patterns, focused on scalable, modular game architecture. Across four shipped mobile titles I have owned 3D gameplay cores, built UI systems from artist mockups, designed and implemented 20 enemy types, and written internal tools that removed repetitive work for the design team.

EXPERIENCE

Unity Developer · Falcon Game Studio

Sep 2025 — Present

Titles published as FALCON GAMES PTE. LTD. and CYLINDER GLOBAL PTE. LTD.

- Own features end to end across the full cycle: implementation, bug fixing and long-term system maintenance on live titles.
- Design and implement core mechanics and systems with scalability and maintainability as the primary constraint.
- Optimise for mobile — memory management and rendering efficiency on low-end devices.
- Contribute to brainstorming and technical design discussions, proposing solutions for gameplay and performance.
- Build automated internal tools that remove repetitive work from the team’s workflow.
- Review code to keep quality standards consistent across the project codebase.

Unity Developer Intern · Falcon Game Studio

Sep 2024 — Sep 2025

- Designed and maintained reusable, scalable code applying SOLID principles and common design patterns.
- Kept games performant and responsive while identifying and fixing bugs.
- Developed internal methods and tools that improved day-to-day efficiency for the project team.
- Worked with cross-functional teammates to integrate logic and refine game feel.

SHIPPED TITLES

Yarn Pull 3D

Core gameplay owner

177K+ installs · 4.58★ · Google Play

Owned the 3D gameplay core of a cosy yarn-sorting puzzle that reached 177K+ installs at 4.58★.

Block Out Color Puzzle Game

606K+ installs · 3.94★ · Google Play

Gameplay & UI, feature ownership

Strike Force: Tank Shooter

4.73★ · App Store

Enemy design & UI systems

Hole Escape Puzzle

21K+ installs · Google Play

UI systems & gameplay support

600K+ installs, still updated 16 months after launch.

Solely designed and implemented 18 enemies and 2 bosses for the late-game worlds, plus the leaderboard and upgrade UI.

Built and optimised the UI system for the studio's newest release, live since July 2026.

SKILLS

Engine & Languages	Unity Engine · C# · C++
Architecture	SOLID · OOP · Design Patterns · Singleton · Observer · State · Factory · Dependency Injection
Gameplay & Systems	Core gameplay mechanics · Enemy & boss design · UI systems (UGUI) · Level logic · Battle pass · Hint systems · Leaderboards
Craft	Mobile optimisation · Memory management · Rendering efficiency · Editor tooling · Data structures & algorithms · Code review
